THE LABOR FORCE IN IDAHO
AND
BASIC ECONOMIC DATA FOR IDAHO

SECTION I. THE STATE OF IDAHO
SECTION II. BY COUNTIES
SECTION III. BY MULTI-COUNTY LABOR MARKET AREAS

DEPARTMENT OF EMPLOYMENT
STATE OF IDAHO
JULIE M. KILGROW, DIRECTOR

Prepared by the
RESEARCH AND ANALYSIS BUREAU

CONTAINS 1986 DATA

INTRODUCTION

This issue is a supplement to the Labor Force in Idaho and Basic Economic Data of Idaho publications. On the following pages are estimates of employment, unemployment, labor force, and the unemployment rate for all counties, labor market areas, and the State of Idaho. The figures are published by month both unadjusted and adjusted for seasonal effects for 1986. The publication also contains a record of Idaho's Nonagricultural Wage and Salary employment by industry, tabulated on statewide, area, and county levels. Historical data for these series can be obtained by writing the Research and Analysis Bureau at 317 Main Street, Boise, Idaho, 83735, or by calling (208) 334-6168.

We hope the publication of this information will assist private and government researchers in their tasks. The data was gathered as a result of the day-to-day activities of the Idaho Department of Employment.

Monthly newsletters are published for seven areas in the state and for the state as a whole presenting labor force and employment by industry data as well as an analysis on the current economic events. These also are available upon request from the office listed above.

DEFINITIONS

Employment comprises wages and salary workers (including domestics and other private household workers), self-employed persons, and unpaid family workers who worked 15 hours or more during the survey week in family-operated enterprises. Employment in both agricultural and nonagricultural industries is included. Also included are persons temporarily absent from work because of illness, bad weather, vacation, labor-management dispute, or because they were taking time off for various other reasons, even if they were not paid by their employers for the time off. Employed persons holding more than one job are counted only once. Commuters are shown at their place of residence and not at their place of work.

Unemployment comprises all persons who did not work during the survey week, who made specific efforts to find a job, and who were available for work during the survey week. Also included as unemployed are those who were waiting to be called back to a job from which they had been laid off.

The Civilian Labor Force comprises the total of all civilians classified as employed or unemployed in accordance with the criteria described above.

The Unemployment Rate represents the number unemployed as a percent of the civilian labor force.

Seasonal Adjustment refers to the correction of an economic time series for regularly recurring seasonal movement which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed to usual seasonal variation, it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluating deviations from the seasonal pattern — that is, changes in a seasonally adjusted series — it is important to note that seasonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors, but, in addition, are affected by the uncertainties of the seasonal adjustment process itself. In the following pages data that has been seasonally adjusted is labeled "adjusted"; raw data is labeled "unadjusted."
